

SIMA

ITALIAN QUALITY ATTACHMENTS

QUALITY | SERVICE | FLEXIBILITY

SIMA HAS BEEN SUPPLYING ITS CUSTOMERS WITH HIGH QUALITY PRODUCTS FOR OVER 25 YEARS.

SIMA has been a leader in the production of concrete mixing buckets since 1992 and is also a reference point for earthmoving equipment such as sweeper buckets, industrial sweepers, angled buckets and pallet forks.

The SIMA premises cover an area of over 10,000 m², where all the design, production and commercial phases are performed.

The investments made over the years have led to a continuous development of the company, using state-of-the-art machinery and high quality materials. Our products are entirely conceived, designed and manufactured in Italy, where we prioritise efficiency and strength, guaranteeing long-lasting results even in extreme working conditions.

Thanks to its young and dynamic team, SIMA is oriented towards the future, designing and redesigning new equipment to make construction site work more practical and faster, guaranteeing a top quality Made in Italy product.

Full customer satisfaction is our main objective, which is why we pay particular attention to the design phase, during which we try to adapt and customise the equipment according to the actual working needs of our customers, as well as during the sales and after-sales process in order to offer a complete 360° service.

Founded in Italy in Sissa, a small town in the province of Parma, SIMA is now an internationally established company thanks to a widespread network of authorised dealers and workshops all over the world.

Recycling

The SIMA mixer bucket is the ideal equipment for producing concrete in a practical way and to transport it wherever needed, keeping the mixture in the best possible conditions. It performs its function quickly, as it only takes 3 minutes to perfectly mix the components.

This product is SIMA's core business and, thanks to more than 25 years' experience in the sector, it undergoes constant improvements to ensure increasingly high levels of performance and resistance, especially for the most intense and busy uses.

SIMA mixer buckets can be applied to any type of skid loader, backhoe, wheel loader, telescopic lift, excavator and tractor with front loader.

In the standard version, each model is equipped with a Danfoss

hydraulic motor, Hardox 500 wear-resistant steel mixing propellers, hot-dip galvanised grid with bag breaker, Bosch Rexroth device for opening drain, hydraulic hoses, electrical connection kit for attaching it to the machine and drain hose. To improve the performance of the mixer bucket and make the concrete production more practical, SIMA offers several options such as, for example, the grid with hydraulic or gas spring opening, double bottom made of Hardox 450 wear-resistant steel, pressure regulating valves and SIMA System multi-attachment system to increase the possibilities of use. In order to be able to optimise our products as much as possible (during heavy duty use or for special applications), we carry out customisations at the customer's specific request.

The SIMA SPZ sweeper is the ideal equipment for collecting milled asphalt, large quantities of gravel and other construction site aggregates. It is designed to be applied to the front of earthmoving equipment such as skid loaders, backhoe loaders, wheel loaders and telescopic lifts.

These attachments are made with a very strong structure, designed for intensive use, which guarantees solidity and reliability over time and are equipped as standard with Ø 600 mm polypropylene brushes (on request it is possible to equip them completely either with steel or mixed), reversible

double-bevel bolted blade combined with anti-wear slides, direct drive motor on the shaft, side and front rubber protection and hoses for hydraulic connection.

To make the sweeper more efficient, SIMA offers various optional extras such as, for example, the side brush (Ø 580 mm) made of polypropylene or steel, which is ideal for cleaning hard-to-reach areas (kerbs, walls, fences, etc.), the pressurised sprinkling kit for reducing dust, including a 100 litre tank, and nylon or steel support wheels for cleaning delicate surfaces.

Sweeper angled

The SIMA SPZ-A sweeper is the ideal piece of equipment for clearing dirt at the side of roads or clearing them of snow and leaves. It is designed to be applied to the front of earthmoving equipment such as skid loaders, backhoe loaders, wheel loaders and telescopic lifts. In order to achieve 100% performance on excavators, too, a fully dedicated version has been designed.

This equipment is made with a very robust structure, designed for heavy-duty use, which guarantees solidity and

reliability over time. The SPZ-A is supplied as standard with polypropylene brushes Ø 600 mm (steel or mixed brushes can be supplied on request), direct drive motor on the shaft and hoses for hydraulic connection.

To make the angle sweeper more efficient, SIMA offers various optional extras such as, for example, hydraulic tilting, support wheels and a pressurised sprinkling kit with tank for dust removal.

Farming

The SIMA SPZ-i industrial sweeper is the ideal equipment for cleaning squares, pavements, cycle paths and areas where you want to pick up even the finest material. It is designed to be applied to the front of earthmoving equipment such as skid loaders, backhoe loaders, wheel loaders and telescopic lifts.

These attachments are made with a very strong structure, designed for intensive use, which guarantees solidity and reliability over time and are equipped as standard with Ø 600 mm polypropylene brushes (on request it is possible to equip them completely either with steel or

mixed), Vulkollan blade, direct drive motor on the shaft, hydraulic opening of the dust collection box, Ø 250 mm solid rubber pivoting wheels, floating coupling system to the operating machine, hoses for hydraulic connection and kit for electrical connection.

To make the sweeper more efficient, SIMA offers various optional extras such as, for example, the side brush (Ø 580 mm) made of polypropylene or steel, which is ideal for cleaning hard-to-reach areas (kerbs, walls, fences, etc.), the pressurised sprinkling kit for reducing dust, including a 100 litre tank, and adaptation for forklift trucks.

Forks for pallets

SIMA lifting forks are suitable for use on construction sites, where pallets of different sizes and weights or other materials such as reinforced concrete pipes, manholes, metal fences, etc. need to be handled. Depending on the load capacity, they can be combined with

any type of skid loader, backhoe loader, wheel loader or telescopic lifts.

For skid loaders, it is strongly recommended to complete the purchase with the anti-tipping protection of the transported load.
