

THE INTEGRATED WEIGHT CONTROL SYSTEM FOR POULTRY

Uniformity is key to profitability

One of the best ways to manage a poultry flock is to control their average body weight and uniformity.

Furthermore, adequate weight control makes it easier to reach the planned weight at delivery and to detect any abnormal situations during the production cycle.

The AccuSmart Scale System is the most complete bird weighing system on the market. It automatically weighs, records and performs all the statistical calculations needed to optimize the weight control of your flock. With the AccuSmart scale, you can effectively track and manage your yields, ensure that you reach your targets and make better decisions regarding the management of your production.

A single controller for up to six scales

A single controller can manage up to six scales independently. Therefore it can control different productions types and cycles at different locations at the same.

Weight control at delivery time

Having a precise knowledge of the average weight allows the producer to accurately adjust feeding and lighting management to reach the target weight on time.

Unique Durable Coating

- Made of polyurea elastomer
- LIFETIME warranty on the plate!
- Water & dust resistant
- Pressure washer safe
- Anti-skid

TECHNICAL SPECIFICATIONS

- 20 inches diameter steel platform
- 25-pound platform for extra stability
- Non-skid coating
- Easy to install and setup
- High quality cables
- Stainless steel, telescopic hanging rod
- Outstanding accuracy
- Exceptional weighing speed
- Chain & hook included
- LIFETIME warranty
