

THE NEW RUBIN 10

- Symmetrical disc arrangement for maximum fuel economy and work without side pull
- Harder DuraMaxx discs with a larger diameter ensure a greater service life and longer operating times
- High-comfort adjustments of impact and levelling harrows for optimal incorporation and levelling of the soil and regrowth
- New transport wheel design for mounted implements to allow the use of heavy rollers and deliver reliably safe operation on the road and the field
- New support wheels for folding semi-mounted implements for consistent working depths even in variable soils and precise pass alignment on slopes

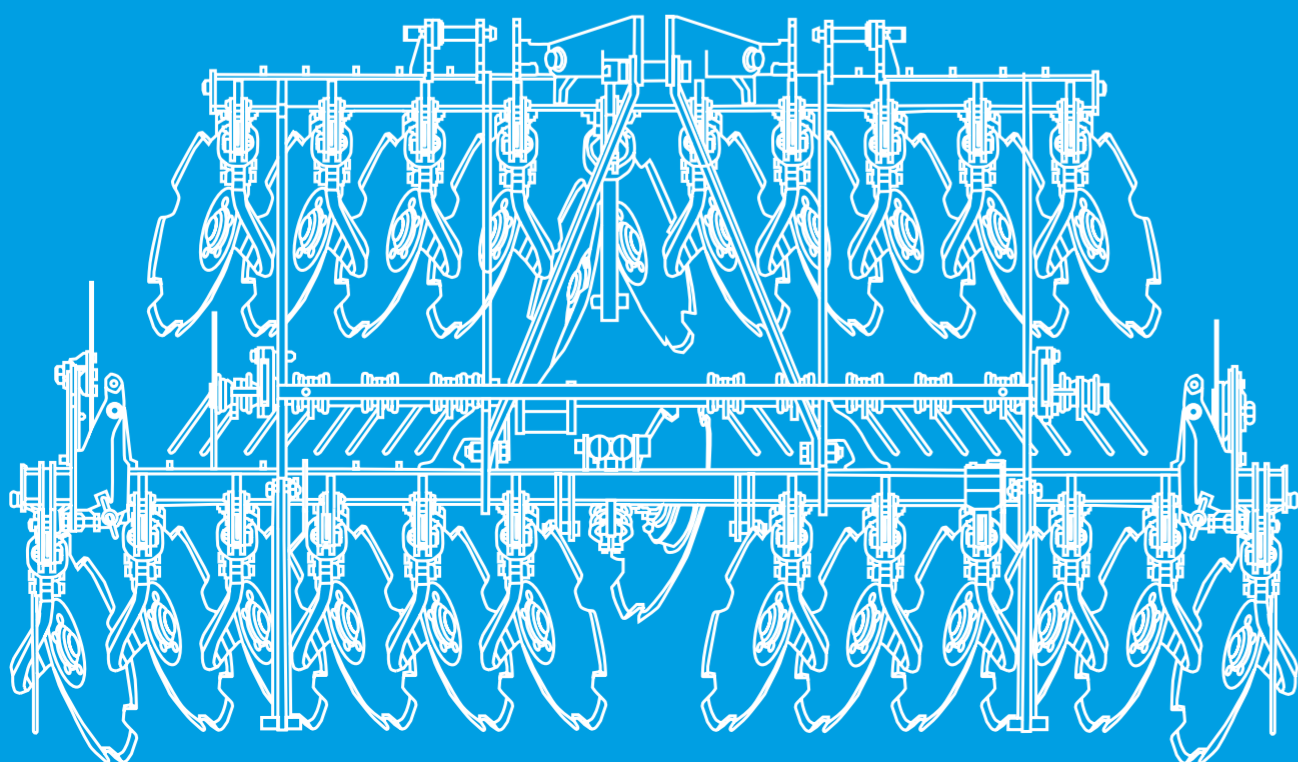

THE NEW RUBIN 10

LEMKEN
The Agrivision Company

No side draft due to symmetrical disc arrangement

- The symmetrical arrangement of every row of serrated concave discs provides precise directional stability with no side draft, even when driving on slopes.
- The middle concave discs are offset. This ensures regular cultivation over the whole working width, without causing clogging of the implement. A patent is pending for this unique arrangement.
