VT FLEX APPLICATOR

VT Flex Applicator

The patent-pending VT Flex Applicator is a **fully customizable fertilizer application tool**. Not only does it precisely place up to three mediums (dry, liquid and NH_3) at high speeds, but it can also be set to 15-, 20-, 22- or 30-inch row spacing. Even more, the coulter blades and application knives can be configured for your unique residue management needs, giving you all the flexibility to enhance your soil fertility program.

Apply Up To 3 Mediums

DRY	Liquid	NH_3
Apply up to 700 pounds of granular fertilizer per acre with the VT Flex Applicator. It's compatible with most makes and models of air carts. For customers who don't already own an air cart, Summers can assist with sourcing one to meet your needs.	The VT Flex Applicator is liquid ready. It can accept practically any liquid tank setup you currently use, from pull-behind carts to saddle tanks.	Boost your nitrogen program by pulling anhydrous ammonia tanks behind the VT Flex Applicator. The application knives and disk levelers are ideal for precisely placing and sealing NH_3 in the soil.

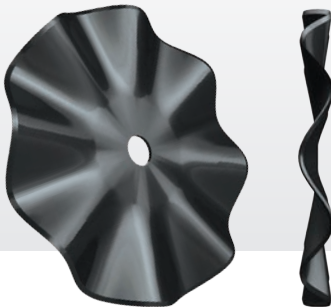

Customizable Knives and Levelers

The high-precision, low-disturbance application knives are fully adaptable to any combination of dry, liquid and anhydrous ammonia fertilizers. They feature 500 pounds of trip pressure to help prevent damage from rocks or other obstructions. Additionally, the independently mounted disk levelers are adjustable for sealing the fertilizer in the root zone.

Coulter Blades

Choose from five different blade options for light or aggressive soil movement. See Blade Selection Chart on specs page.

Paint Color

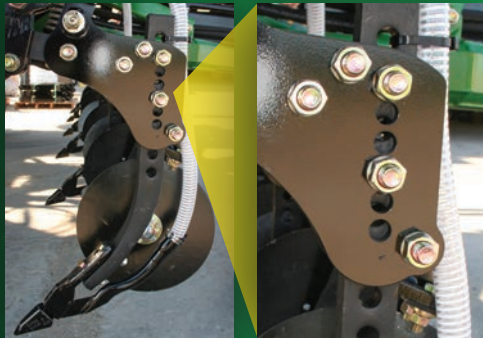

With any custom Summers equipment order, choose between green or red, whichever best fits your farming operation.

Coulters

Not only do the coulter blades slice residue in-row, but they can also be configured for mid-row slicing. This, in addition to five different blade options, makes the VT Flex Applicator an ideal tool for residue management programs of all types.

Independent Depth Adjustment

With the VT Flex Applicator you can independently vary the placement depth of each type of fertilizer, relative to the coulter depth. The knives can place fertilizer directly in the root zone to increase nutrient availability to the plant and maximize effectiveness of the application.

Easy Machine Leveling and Depth Control

The patent-pending machine leveling feature doesn't require any tools to adjust. Additionally, the unit's single-point depth control allows quick and easy depth setting.

Fast Operating Speeds

The VT Flex Applicator is designed for operation at **6-8 miles per hour**, with high dry application rates of 600-700 pounds per acres, helping you complete fertilizer applications in short windows of time.

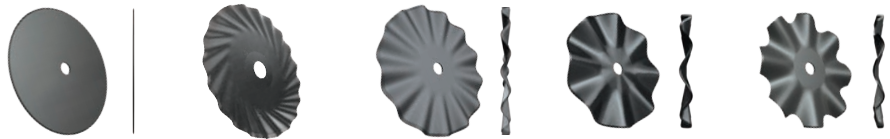

FEATURES & BENEFITS

SERIES	VTF1750	
Working Width	60'	Ask About Other Sizes Available Soon!
Transport Width	24' 8"	
Transport Height	17'	
Front Blade Diameter	20" - 22"	
Front Blade Angle	0°	
Estimated Weight (lbs)	45,000	
Approx. Engine HP	525-620
