

MANTIS

Optimized Prime Mover

Safety

The Mantis is designed with safety in mind. A full visibility cab allows you to see your work from any angle. A rear-view camera and backup alarm makes reversing simple.

Compatibility

As an optimized tool carrier, the Mantis is designed with the space claim for various attachments. The Mantis has the ability to include a side mount boom, a front mount, and a rear mount tow hitch.

Maneuverability

With the ability to rotate the cab 90 degrees in either direction and crab steer, the Mantis gives you full visibility and maneuverability no matter where you are.

Transportation

Unlike traditional tractors with boom mowers, the Mantis has a standard transport width of 102" which means it can be operated on all roadways.
