INTRODUCTION

To obtain maximum benefits from the FLOATING RING PICKUP PULVERIZER, please study this manual carefully before starting assembly or operation. A special section, "Assembly Instructions", is included. If items in this manual are not understood, contact your local BRILLION dealer

The symbol shown here appears in this book and on your machine where special attention is needed to safeguard yourself against harm. It warns, "**ATTENTION! BE ALERT! YOUR SAFETY IS INVOLVED!**" The message following the symbol points out important safety precautions. Read it and be alert to the possibility of personal injury or death.

BE ALERT!
YOUR SAFETY IS INVOLVED

Location Reference

Right Hand, Left Hand, and Forward designations are made from the viewpoint of standing behind the machine and facing the direction it will travel during field operation.

Parts Ordering

When ordering parts for this machine, include the complete model number and serial number. Refer to the name plate on left side of the mast as shown in Figure 1. Please read and record this number upon taking delivery of this machine.

FLOATING PICKUP PULVERIZER Model _____

Serial Number _____

Date Purchased _____

Be sure to read the warranty card which is shipped with the machine. Return the proper portion of the card for recording at the factory.

FIGURE 1

SAFETY SUGGESTIONS

Investigation has shown that nearly one-third of all farm accidents are caused by careless use of machinery. You can do your part in improving safety by observing the following suggestions. Insist that all people working with you or for you abide by them.

1. Do not stand between tractor and implement when attaching or detaching implement, unless neither are moving.
2. Do not allow anyone to ride on tractor or machine.
3. Lower machine to ground when not in use.
4. Unhitch implement from tractor on a level surface only. Use support stands and be sure they are fully secured with pins and hair pin cotters.
5. Do not transport at speeds over 20 MPH.
6. When transporting machine, avoid sudden stops or sharp turns because the weight of the machine may cause the operator to lose control of the tractor.
7. When transporting the machine on a road or highway, use adequate warning symbols, reflectors, lights and slow moving vehicle signs as required.
8. Securely block machine when working on or under it to prevent injury in case of hydraulic failure or inadvertent lowering by another person.

SAFETY WARNING SIGNS

The "WARNING" signs illustrated on this page are placed on the machine to warn of hazards. "The warnings found on the sign are for your personal safety and those around you." Their locations on the machine are shown on the following page. **OBSERVE THESE WARNINGS!**

Keep these signs clean so they can be observed readily. Wash with soap and water or cleaning solution as required.

Replace "WARNING" signs should they become damaged, painted over or if they are missing.

When replacing decals, clean the machine surface thoroughly using soap and water or cleaning solution to remove all dirt and grease.

Figure 2B

SPECIFICATIONS

Subject to change due to product improvement

Model Designation

Basic model is denoted by: **PPF**= **P**ickup **P**ulverizer with **F**loating ring wheels

Numbers following indicate machine widths in feet:

6', 8', 10', 12', 14', & 16' wide

Letter following indicates wheel size:

B=4K392; 20" O.D., 14" I.D.

Number following indicates

Pipe drum diameter sizes: 12"

EXAMPLE: PPF10B12 = Floating ring pulverizer which is 10 Feet wide and has 20" outside diameter wheels on a 12" pipe drum.

Basic Machine Specifications

Overall Width: The frame width is 15 1/2" wider than the rolling width in all sizes.

Overall length: Approximately 28 1/2"

Machine weights

There are 5 wheels per foot of machine width

"B" size wheels weigh 34 pounds each:

Machines with "B" wheels vary in weight from 245 lbs/ft to 266 lbs/ft of rolling width.

OPERATING INSTRUCTIONS

Securely block machine when working on or under it to prevent injury in case of hydraulic failure or inadvertent lowering by another person.

1. Stand Position

OPERATING POSITION

When operating, keep support stand locked up in raised position.

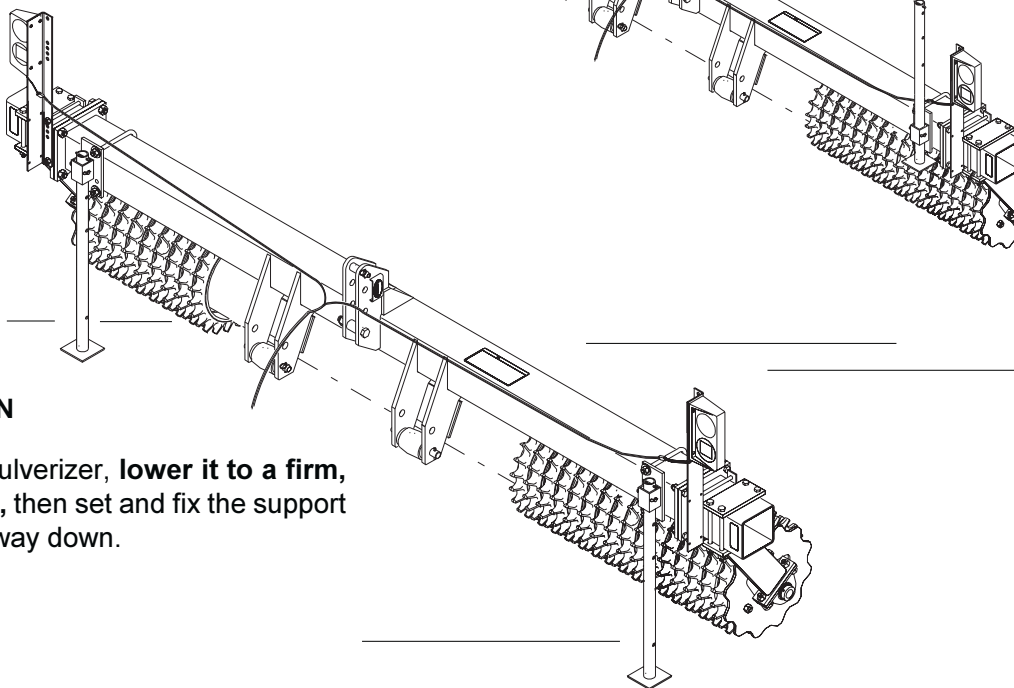

Figure 3

PARKED POSITION

To park the pulverizer, **lower it to a firm, level surface**, then set and fix the support stand all the way down.

Fasteners

After the first 1 - 2 hours of use, check over all fasteners to insure that they remain tight. Periodic checks should be made thereafter.

2. Attaching Tractors to Pulverizers

This pulverizer is designed to be mounted to tractors with a category II or a Category III 3-point hitch. Instructions for attachment are as follows:

With Category II Hitch

See Figure 4. Use the lower set of holes for the tractor lift arms to provide maximum transport clearance. (Upper holes are for other model machines).

Install lower hitch pins with cast iron spacers toward outside of machine. Secure with klik pins. The 1-7/16" O.D. Sleeves are not used.

For the Quick Coupler:

Use the bottom mast hole. Install the 1" x 4-1/2" cap screw, 1" x 2-1/8" pipe spacer, 1" lock nut, and tighten securely. Unused pin and sleeve may be stored in top hole.

For the Three-Point Free Link Hitch:

Use the second lower mast hole for the 1" clevis pin and klik pin. Install 1" x 4-1/2" cap screw and 1" x 2-1/8" pipe spacer in the bottom hole, attach lock nut, and tighten securely. The 1-1/4" O.D. x 1-15/16" sleeve is not used.

Be sure all hitch points seat properly. Watch for possible interference between pluverizer, and linkages when raising the first time.

Figure 4

With Category III Hitch

See Figure 5. Use the lower set of holes for the tractor lift arms to provide maximum transport clearance. (Upper holes are for other model machines).

Install lower hitch pins with cast iron spacers inside of machine and 1-7/16" O.D. sleeves toward outside. Secure with klik pins.

For the Quick Coupler:

Use the second lowest mast hole for the 1" x 4-1/2" cap screw and 1" x 2-1/8" pipe spacer. Install the lock nut and tighten securely. Unused pin may be stored in top hole.

For the Three-Point Free Link Hitch:

Use the second highest mast hole and install the 1" clevis pin, 1-1/4" O.D. x 1-15/16" sleeve, and klik pin. Install 1" x 4-1/2" cap screw and 1" x 2-1/8" pipe spacer in the bottom hole, attach lock nut, and tighten securely.

Be sure all hitch points seat properly. Watch for possible interference between pulverizer, tractor, and linkages when raising the first time.

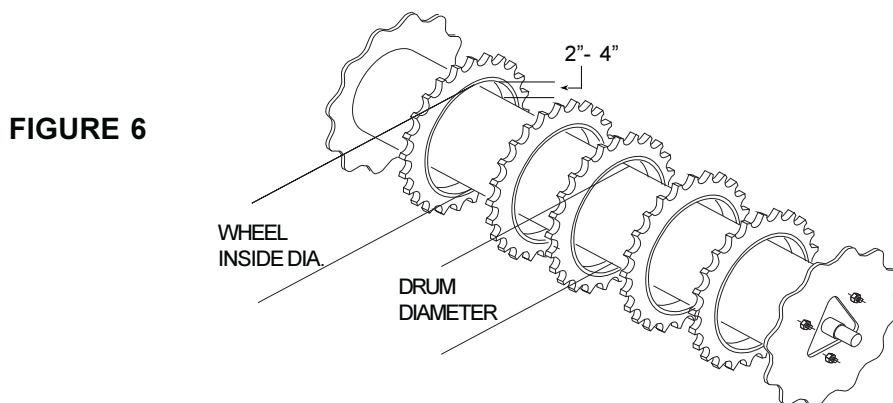

Figure 5

Field Operation

The floating ring pulverizer is designed with rings whose inside diameter is two to four inches greater than the drum which supports them. This allows the packer wheels to follow the irregular contours in your fields.

The drum assembly can be mounted to the frame in two ways. When mounted as shown in figure 7A, the wheels will have a tendency to pack the soil. When the wheels are mounted as shown in figure 7B, the wheels will act more like a rotary hoe and will have a tendency to loosen the soil. To change the mounting of the wheel and drum assembly to the frame, follow these steps:

1. Lower the wheels to the ground.
2. Support the frame with a tractor lift.
3. Remove the bolts which hold the pillow block bearings to the frame.
4. Raise the frame above the roller assembly.
5. Drive tractor with frame around to opposite side of rollers.
6. Re-attach the pillow block bearings to the frame.

REPLACING OR ADDING ROLLER WHEELS

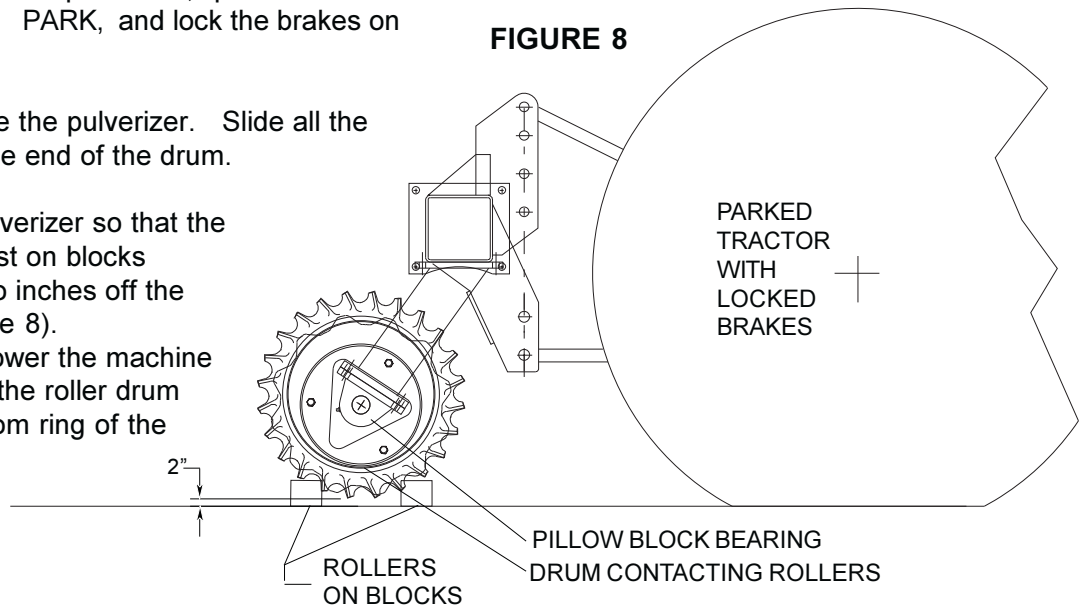

Although the packer wheels are manufactured from high grade ductile iron, wear or breakage may require that some wheels be periodically replaced. Follow these steps when replacing wheels.

1. Attach a tractor to the pulverizer, put the tractor transmission into PARK, and lock the brakes on the tractor.

Hydraulically raise the pulverizer. Slide all the wheels toward one end of the drum.

Lower the pulverizer so that the packer wheels rest on blocks approximately two inches off the ground (see figure 8).

Continue to lower the machine till the outside of the roller drum contacts the bottom ring of the packer wheels.

2. Remove the pillow block bearing and the bearing support from the end of the drum to which you will be adding wheels. The pillow block bearing is secured to the drum shaft by means of an eccentric locking collar.

Loosen the set screws which tighten the collar to the shaft. Then with a punch, rotate the collar in the direction opposite which the shaft turns in normal operation.

Next remove the nuts from the bolts which mount the bearing supports to the frame and slide the bearing and the support off the shaft.

Remove the three 5/8" lock nuts which attach the retainer plate to the drum and remove the plate.

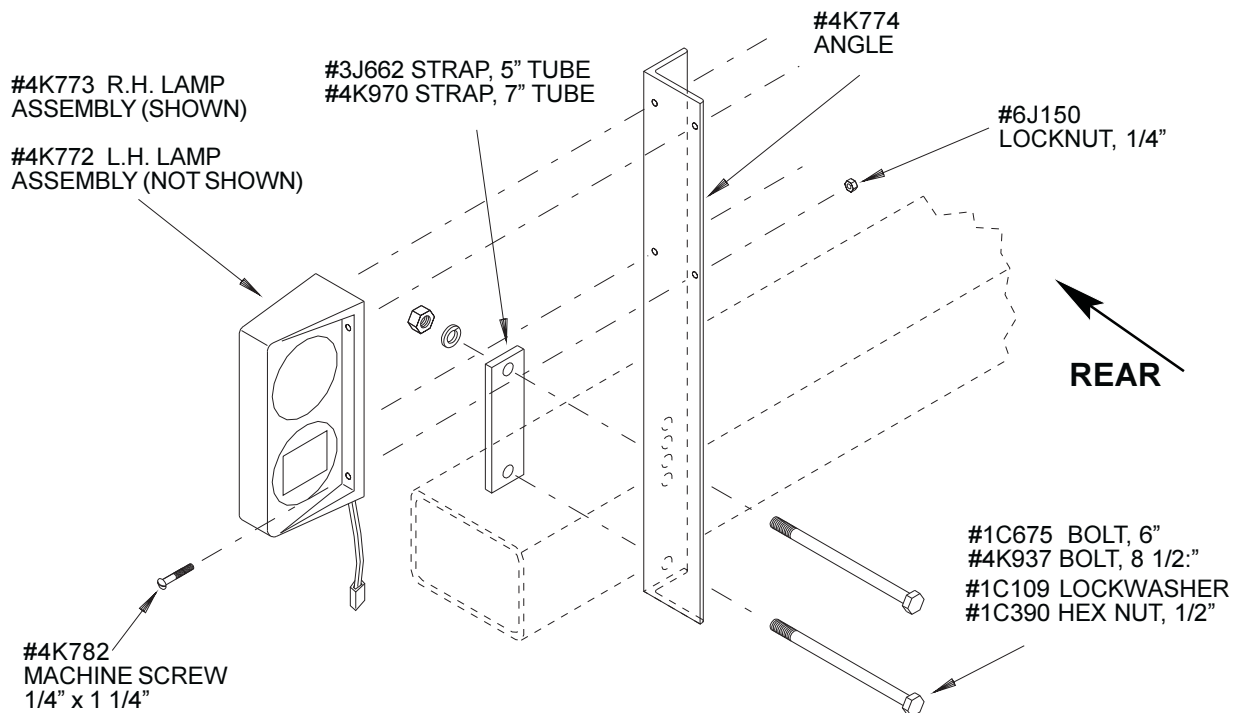

3. Slide the replacement wheels onto the drum, replace the retainer and tighten the lock nuts to 150 ft.-lb.

Slide the pillow block bearing and bearing support onto the shaft until the bearing bottoms against the shaft shoulder.

Replace the bolts which mount the bearing support to the frame and tighten the lock nuts to 150 ft.-lb.

Now take a punch and rotate the locking collar of the bearing in the direction which the bearing will rotate and tighten the set screw against the shaft.

WARNING LIGHT ASSEMBLY

1. Assemble #4K774 to right side of machine frame member. Attach as far to outside of frame as possible using straps and machine bolts or U-bolts as furnished. See illustration above. Assemble the other angle in similar fashion on the left side of machine.
2. Attach lamp assemblies with fasteners shown (amber facing forward; red and amber facing toward the rear with amber above red).
3. Connect "wishbone" wiring harness ends to connectors on lamp assemblies. (**IMPORTANT: wires are color coded on wishbone harness. Connect end with yellow wire to left side lamp assembly. Connect end with green wire to right side lamp assembly.**) Run wishbone harness wires along rear frame member to center of machine.
4. At center of machine assemble the connector of the straight harness to the wishbone harness. The 7-pin plug on the straight harness connects to the tractor socket when in use. Allow enough harness length to reach tractor socket and roll or fold up excess. Attach permanently to pulverizer frame. All wires must be firmly attached to machine frame members so they don't droop or become torn loose by field debris. Use plastic cable ties, provided, and electrical tape to secure all wiring.

37 **Brillion**

CAUTION
MOVING MACHINES CAN CAUSE INJURY. KEEP AWAY!
1. DO NOT STAND OR WALK IN FRONT OF TRACTOR WHEN IT IS MOVING FORWARD.
2. DO NOT STAND OR WALK BETWEEN TRACTOR & IMPLEMENT WHEN EITHER OR BOTH ARE MOVING.
3. DO NOT STAND OR WALK BEHIND IMPLEMENT WHEN IT IS BEING BACKED UP.
4. DO NOT RIDE OR ALLOW OTHERS TO RIDE ON TRACTOR OR IMPLEMENT.
5. BLOCK IMPLEMENT TO PREVENT MOVEMENT WHEN UNHITCHED
