Specifications subject to change without notice.

The three-point hitch is Cat. II and Quick Hitch compatible on two and three shank models. One shank models are Cat. I and Quick Hitch compatible.

Shank mounts can be easily moved on the tool bar for infinite shank spacings.

The shanks are mounted to a $4^{\prime \prime} \times 6^{\prime \prime}$ frame structure adding to the machine's ruggedness. The frame structure is $5^{\prime \prime} \times 7^{\prime \prime}$ on single bar models.

The under frame clearance is $29^{\prime \prime}$ on units equipped with standard shanks and $35^{\prime \prime}$ on units with high clearance shanks.
$21 / 2^{\prime \prime}$ Flat Steel Points and Flat Reversible Wearstrips are standard equipment.

Model SCP-33 Shown with Standard Equipment

Heavy-Duty Laser Cut Parabolic Shanks are shear bolt protected with $0.625^{\prime \prime} \times 3.75^{\prime \prime}$ shear bolts.

Soil conditions such as density, moisture content, and root mass have driven many customers to use Brillion Sub Soilers as an annual fix for an age old problem...compaction. The Brillion Sub Soiler is highly maneuverable because it is close coupled to the tractor and requires only a nominal space in which to turn. These small units equipped with standard shanks offer $29^{\prime \prime}$ of under frame clearance, while two and three shank units equipped with high clearance shanks offer $35^{\prime \prime}$ of under frame clearance providing extra residue handling capacity. Please note: Maximum shank working depth for all models should not exceed $16^{\prime \prime}$ and maximum horsepower should not exceed 40 HP per shank.
