HOOF CARE MANAGEMENT

To maintain hoofbath efficiency, research shows that the solutions should be changed after 200 to 300 cows have crossed them. On many dairy farms, it means changing the solutions at the most awkward moment in the middle of the milking cycle. The correct measurement of chemicals and the safety of workers are important additional challenges in maintaining effective hoofbaths.

StepGuardian is a durable, fully automated hoofbath that saves time and money.

- **Dynamic and automated system** – Fully automatic, computer controlled that eliminates the time spent cleaning, filling, filling and emptying the Hoofbath
- **Economical** – Reduces chemical waste by having a precise dosing system to distribute the chemicals in the mixing chamber and it can be controlled at the station or remote from your office using the included PC software
- **Safer workplace** – Workers handle chemicals far less than with manual systems, locating of the mixing chamber in the laundry room allows a better mix of chemicals
- **Safe for equipment** – By not injecting chemicals online, you will avoid delivery problems, which could damage the valve systems and jeopardize your water supply
