

Liquid Carbon

Formerly known as Activ12

Black Earth **Liquid Carbon** is a ready-to-use extracted liquid humic acid. Containing 7.65% humic acid (HPTA method), Liquid Carbon is a liquid humic acid that has limited blending capabilities with certain fertilizers, but is ideal for use in starter fertilizer applications, top dressings, injection through irrigation water and foliar applications.

Application Rates:

IRRIGATION WATER	Inject at a rate of 9.35 L/ha (1 gal/ac).
FOLIAR SPRAY	Utilize 9.35 L/ha (1 gal/ac).
PREPLANT IN-FURROW AND SIDE DRESS APPLICATIONS	Apply 5 – 12.5L per ha (0.5 – 1.4 US gal/ac) by band or broadcast in tank mixture with or after fertilizer applications.

Contains:

7.65% humic acid
(HPTA method)

1.79% fulvic acid

Applications:

- Agriculture
- Environment
- Turf

Content Analysis:

HUMIC ACID	7.65% humic acid (HPTA method)
FULVIC ACID	1.79% fulvic acid
pH	10.5
COLOUR	Black
TYPE	Liquid
SPECIFIC GRAVITY	1.11

Sizes available:

- 265 gallon (1,000 L)
- 5 gallon (18.9 L)
