

ROLLER CRIMPER

SPECIALTY PRODUCTS

MANAGE COVER CROPS EASILY

An affordable and effective tool to take on heavy cover crops.

Our heavy-duty Roller Crimper is engineered to reduce material wrap around bearings while effectively crimping as part of a reduced chemical and residue management program.

The beveled-edge Dura-Crimper is uniquely designed to crimp through any cover crop regardless of plant thickness or height. A full crimp ensures the crop will create mulch, suppress weeds, add organic matter and reduce water evaporation.

Bearing Guard

15 foot option

MODEL	Cutting Width	Transport Width	Transport Height	Tool Bar	Weight
SPR 6R30-DC	15'	15'5"	-	Rigid	2,200 lbs
SPR 12R30-DC	30'	16'3"	13'4"	Folding	4,400 lbs

FEATURES AND BENEFITS

- Crimp mature cover crops to kill without chemical application
- Crimp immature cover crops to provide mulch, which suppresses weeds
- Save time. Crimp and plant in one pass by mounting the Roller Crimper to the front of the tractor and pulling a 3-point planter in the back.
- Knock down corn fodder in the fall or spring without compromising soil structure
- Lightly till in cover crop seeds; size residue at the same time
- Lightweight design reduces impact to soil compaction and does not require additional weight, saving time and fuel costs
- Beveled blades require less weight than conventional crimpers that use flat bars
- Aggressive blades can also be used to incorporate seed
- Unique bearing guard protects against wrapping / plugging
- Blades will penetrate ground in uneven conditions to get full crimp
- Setup on rear or front mount 3 point
- Weight built into frame, 7x7 toolbar
